center**

Pioneering Possibility

for individuals with autism and their families since 1999

The Faison Center's Behavioral Health Services include a speech and language intervention program:

Under the supervision of a clinician who holds dual certifications as a speech language pathologist and behavior analyst, our team is able to provide comprehensive evaluations and empirically-driven direct clinical services to individuals with autism and other developmental disabilities.

Therapy can occur in our on-site clinic, in a community setting or in another supportive and collaborative environment (i.e. school or home). Outreach endeavors/caregiver trainings and consultations are also available to assist in expanding the applications of the intervention.
